

# Bio Bleach

**Nappy Sanitizer, Stain Remover, Soaker**  
**Low temp – high temp**

## What stains do you want to remove?

BIO BLEACH is an important asset when it comes to producing the perfect wash result. Stains like wine, egg, fruit juice even some soft drink stains that contain food dyes can be removed. Ideal for protein stains like gravy, mayonnaise, rich sauce and curry spills. Grass stains and mildew stains can be the most persistent. Soak longer for the best results.

## Works better at low temperatures

Other types of soakers are slow to activate in cold water. BIO BLEACH activates at both low temperature and high temperature. Hot water creates a more aggressive and faster release of cleaning energy.

## DIRECTIONS

**Presoaking:** This method ensures “problem” garments and flatware are brought up to standard in every case. Less rejects mean more happy customers.

Add approx. ¼ cup to 5 litres tepid or hot water.

**In wash additive:** For a mixture of medium soiled clothing or flatware, just add ¼ cup BIO BLEACH per 4 to 5 kg load with BLUE PRIDE. Hot water speeds up results.

## SAFETY AND HANDLING

Contains alkaline salts, may cause skin drying on continued skin contact. Wear rubber gloves for extended use.

Biodegradable

*High Technology Chemistry and Cleaning Systems for the Carpet Maintenance and Sanitation Industries*
